

A100 Volatility-Protected Long Only US Equity

Investment Objectives: A hedged long-only equity strategy designed to maximize return while matching the volatility of the S&P500 Index.

Methodology: The Proteom Fund employs computational biology -- genetic algorithms, neural networks, and simulated environments -- to create profitable investment strategies. The investment universe is comprised of the S&P500 Index membership, and the strategy occupies about half of those positions with monthly turnover.

Management: Successful money management professionals with 20+ years of trading experience oversee portfolio construction and maintenance using state of the art proprietary computer systems with a constant monitoring of risk models and performance optimization to maintain predetermined performance targets.

Testing: This page describes a back-test of the A100 Volatility-Protected Long Only US Equity Fund from 1990-2004. The next page shows a comparison of these back test data against the Tuna Long Only Index for its published period of 1994-2004.
